

Orion Series: Semi Down Draft Paint Booth — Our Semi Downdraft paint booth is the ultimate fusion between crossflow and downdraft airflow. Air enters through the filtered intake plenum, and is exhausted through the rear of the paint booth, making it the perfect solution for those who do not want to install a pit. Air comes into the booth through a filtered intake plenum and is exhausted through the sides of the paint booth. Booths are manufactured using 18 gauge galvanized steel on precision CNC equipment. Optional double wall construction available. All components used are ETL or third party certified. Our booths are Nut & Bolt type construction, precision punched 6" on center and 2" companion flanged for easy assembly in the shop. Includes inside service lights compatible with 4-foot fluorescent bulbs or LED bulbs. LED fixture upgrade available. ETL certification included with your purchase! Made in USA.

AIR FLOW

Semi-downdraft booths are a hybrid of downdraft and crossdraft booths that use pressurized air to create a diagonal airflow.
