

Orion Series: Cross Flow Paint Booth — Our Cross Flow paint booth is designed for high-volume production environments where efficient horizontal airflow is essential. Air enters through the filtered intake plenum at the front of the booth and travels horizontally across the workspace, exiting through exhaust filters at the rear. This creates a consistent, clean airflow pattern ideal for automotive refinishing and industrial coating applications. Option for pressurized cross flows with a bridge plenum at both ends. Booths are manufactured using 18 gauge galvanized steel on precision CNC equipment. All components used are ETL listed in Canada and USA, built to NFPA standards. Our booths are Nut & Bolt type construction, precision punched 6" on center and 2" companion flanged for easy assembly in the shop. Includes inside service lights — CID2 inside 4-tube light fixtures compatible with 4-foot fluorescent bulbs or LED bulbs. LED fixture upgrade available. ETL certification included with your purchase! We ship nationally. Made in USA.

CROSS FLOW AIR PATTERN

Air travels horizontally from intake at the front to exhaust at the rear, creating a consistent clean airflow across the entire workspace.

STANDARD FEATURES:

- Paint booth cabin
- Inside service lights (4-foot fluorescent or LED compatible)
- LED fixture upgrade available
- 3-fold doors
- Man door 3'W x 7'H
- UL listed tube axial fan & motor
- Exhaust fiberglass filters
- Intake tacky-type filters
- Accessories: Rubber gaskets, door seals & hardware included
- Duct packages sold separately**

OPTIONAL UPGRADES:

- Double wall
- Viewing windows
- Pressurized cross flow with bridge plenum
- Fire suppression
- Height & length extensions
- Powder coating
- Galvanized or powder coated finish
- Air-makeup heated & non-heated
- Blanket intake upgrades (for heated booths)
